CS566 Mid-term — Track 4 Evaluation Appendix (development samples)

This appendix reports newly computed PSNR and SSIM for the two committed kitchen1 256-frame, 128×128 samples. It does **not** reproduce the existing report's 1024-frame, 300×304, last-reference experiment.

Burst	Method	PSNR mean (dB)	SSIM mean
000000	naive	11.931	0.1589
000000	aligned	11.863	0.1504
000000	taa	11.860	0.1476
000001	naive	9.777	0.1397
000001	aligned	9.521	0.1337
000001	taa	9.516	0.1277

Protocol: 64-frame groups, fixed first-group reference for aligned/TAA, shared exposure clip(2.7 × reconstruction, 0, 1). PSNR/SSIM are arithmetic means of RGB channel metrics. SSIM uses a 7×7 local uniform window. Fixed gain 2.7 is provisional, not fitted separately per method.

Kitchen1 burst 0 — shared-exposure comparison

Kitchen1 burst 1 — shared-exposure comparison
